

Terminology

chuuchuu database terminology

column	explanation	notes
agency	operator or country from which the data was recorded.	This may not be the same as the actual train operator or the country the stopover was recorded for
routeType	Line type abbreviation	for example 'ICE', 'NJ', 'TGV'
routeNumber	Number of the specific trip, for example '123'.	Together with routeType used to identify the trip (e.g. ICE 123). Not the same as a higher level number (e.g. some routes may have a shared number like S5 with individual trips numbered S5 1234)
date	date that the trip started.	Can be used to identify stopovers that belong to the same trip even if there are date overlaps (e.g. night trains)
deutscheBahnStopId	Generalised unique stop ID for the station.	The first two numbers (usually 8x) identify the country the stop is in, see https://en.wikipedia.org/wiki/List_of_UIC_country_codes . Keep in mind that these stopIds are often but not always the same as a UIC stopId (especially not for DB stations)
timestamp	Date the stopover was recorded	If the timestamp is earlier than the arrival or departure date, then the delay prediction was not final and thus may not be accurate
originalRoute	RouteType and routeNumber as it was recorded from its source	May be different from routeType and routeNumber if those are usually presented differently in the original source's apps and stations
originalStopId	StopId exactly as it was recorded from its source	
stopName	Name of the station	
arrival	Effective arrival date	All dates are in ISO and their respective local timezone
plannedArrival	Planned arrival date	

arrivalDelay	Difference between effective and planned arrival dates	All delays are expressed in seconds. If null, no delay was recorded but doesn't mean there wasn't any delay
arrivalPlatform	Effective arrival platform	
plannedArrivalPlatform	Planned arrival platform	
arrivalCancelled	Whether the arrival was cancelled or not	t = true, f = false. If null and a delay was recorded, you can assume the arrival was not cancelled.
departure	Effective departure date	
plannedDeparture	Planned departure date	
departureDelay	Difference between effective and planned departure dates	
departurePlatform	Effective departure platform	
plannedDeparturePlatform	Planned departure platform	
departureCancelled	Whether the departure was cancelled or not	
extra	Extra notes	May contain service notes

General transport terminology

Term	Explanation	GTFS term	<u>FPTF</u> term	chuuchuu database term
Journey	A traveller making a journey from A to B which can consist of multiple legs.		journey	
Leg	Single segment of a journey. For example A > C > B		leg	

	contains two legs with a transfer at C.			
Transfer	Connection between two legs in a journey.	transfer (/ block)		
Line	A recurring schedule of a train that follows a predefined route, which has a type (eg ICE) and a number (eg 123). For example, ICE 123 from Berlin to Hamburg which leaves Berlin at 12:00 every weekday.	trip	line	routeType + routeNumber or originalRoute
Trip	A specific instance of a line running according to a schedule on a specific day. For example, ICE 123 running on January 1.	n/a	trip	can be identified by date
Route	A sequence of locations served by a train. Multiple lines can follow the same route. For example, ICE 123, 456 and 789 all follow the route Berlin-Hamburg	route	route	
Delay	Difference between the actual time of arrival or departure at a stop and the scheduled time		arrivalDelay / departureDelay	arrivalDelay / departureDelay
Origin	Starting point of a journey (journey origin) or a leg (leg origin) or a trip (trip origin)		origin	
Destination	Final point of a journey (journey destination) or a leg (leg destination) or a trip (trip destination)		destination	
Stopover	Intermediate stop between origin and destination on a leg. For example, on the leg A > C the train also stops at stations D, E, F in between		stopover	
Travel time	Time between departure at an origin and arrival at a destination			
Transfer time	Time between arrival at a transfer station with the previous leg and departure with the next leg (= the time a traveller has to change trains)			

Dwell time	Time between arrival and departure of a trip at a stopover (= the time a train stands still at a stop)			
Trip time	Time between departure from the origin and arrival at the destination of a trip (= the time a line spends to get to its destination)
